

Model 7000

EXCELLENT FOR MULTIPLE USERS

With its two levers, and a dial on the side to adjust tilt resistance, this model is very easy to use. A chair that offers great comfort and good support, even if used by several people. The Model 7000 is an ergonomic work chair with a synchroglide tilt mechanism, which means that the backrest moves about twice as much as the seat when you tilt the chair. The seat also slides back a little when tilted backwards, unlike most other chairs with synchroglide tilt mechanisms. This keeps your back in constant contact with the backrest. Tilting also opens the hip angle, closing it again when tilted forwards, which stimulates blood circulation in the trunk.

- The tilt mechanism moves about 15° backwards and 2° forwards
- The backrest is freely height adjustable
- The seat is freely height adjustable
- Six-position seat depth adjustment within a range of 8 cm
- Available as ESD model
- Certified for 24 hours of use
- As standard the chair is fitted with castor wheels for soft floors, a black base and a polyether foam seat.

1 With its four elastic bands, the backrest adjusts to the natural shape of your back. Your back receives maximum support and is held in a natural upright position with a minimum of muscle strain. This relieves the muscles and enables them to relax.

2 Armrests can offer comfort to those who wish to vary their work posture. Malmstolen offers several different armrests among its accessories. All armrests are height adjustable and easily attached and removed. Moreover, ErgoFlex also features depth adjustment and can be rotated 25° inwards.

3 The adjustable headrest is an optional accessory that relieves head and neck muscles. Perfect for those who like to use the chair's tilt function and to work in a reclined position now and then.

4 The aluminium base is available in two models - polished and black (painted). To keep your chair mobile, you can also choose castors that suit your workplace floor. Soft castors for hard floors and hard castors for soft floors.

specifications

System	Classic
Tilt	Synchroglide
Tilt range	15° backwards, 2° forwards
