

Model R7

IDEAL FOR MULTIPLE USERS

A chair with slightly fewer adjustments for multiple users. The synchroglide tilt mechanism allows the backrest to move about twice as much as the seat when you tilt the chair. Unlike similar chairs, the seat slides back a little when tilted.

This means unbroken contact between your back and the backrest. When tilted the hip angle opens and closes, which stimulates blood circulation in the trunk. The RelActive backrest has a resilient spring action with ZenXit integrated with the foam padding, enabling the backrest to automatically adapt to your back. The seat has a soft, rounded waterfall front that minimises the risk of pinching nerves and blood vessels behind the knee. The seat has a gel membrane that reduces the effect of shearing, the tendency to slide forward, and further improves weight distribution.

- The tilt mechanism moves about 15° backwards and 2° forwards
- Backrest available in two versions, High and Medium
- The backrest is freely height adjustable
- The chair is freely height adjustable
- Six-position seat depth adjustment within a range of 8 cm
- Certified for 24 hours of use
- As standard the chair is fitted with castor wheels for soft floors, a black base and a polyether foam seat with LiquiCell membrane.

1. The spring system in the backrest suits 95% of all users without the slightest adjustments. This ability to adapt means you receive unsurpassed support and relief, which makes it easy for your muscles to relax.

2. The adjustable headrest is an optional accessory that relieves head and neck muscles. Perfect for those who like to use the chair's tilt function and to work in a reclined position now and then.

3. Medium backrest with extremely high comfort level. For those who prefer a slightly smaller backrest.

4. The aluminium base is available in two models - polished and black (painted). To keep your chair mobile, you can also choose castors that suit your workplace floor. Soft castors for hard floors and hard castors for soft floors.

5. Armrests can offer comfort to those who wish to vary their work posture. Malmstolen offers several different armrests among its accessories. All armrests are height adjustable and easily attached and removed. Moreover, ErgoFlex also features depth adjustment and can be rotated 25° inwards.

specifications
