Pascal by DUX® seat

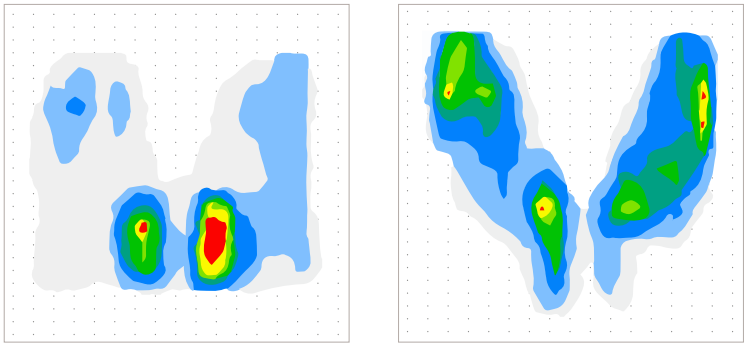

A unique pressure-relieving seat with coil springs from the Swedish bed manufacturer DUX®.

Sitting on hard surfaces compresses the outer blood vessels of the legs which reduces blood circulation and leads to numbness and discomfort.

The Pascal by DUX® seat is fitted with springs of varying hardness, which gives excellent weight distribution and stimulates the blood circulation in the legs. The construction increases micro-movements in the hips and pelvis, which reduces the static load on the spinal discs and the muscles of the lumbar spine and sacrum.

The diagram below shows how the weight is distributed evenly over almost the entire contact area of the body. This provides support and relief, prevents pain and keeps you alert and productive throughout the day.

Seat pressure diagrams of premium chairs from two of the largest Nordic manufacturers.
